

Incident Oversight

Improve patient safety. Fast.

Fast capture

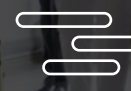

NHS England LFPSE/PSIRF

Any device

Real-time analytics

Lessons learned action management

Easy admin

Understand more. Improve sooner.

The NHS England update of the NRLS to the LFPSE (Learn From Patient Safety Event) system is required in order to learn more from patient events and increase the pace of improvement, consolidate STEIS and support PSIRF. With the increased data captured the speed and ease of collection is crucial.

Minimise clinical time wasted

Incident Oversight is user-centric, minimising the time it takes clinical staff to complete LFPSE data capture. The new Oversight Fast Form is benchmarked to save staff 45% of the time needed to complete an LFPSE capture compared to other LFPSE systems.

Oversight delivers back 1000's of hours of crucial clinical and non-clinical time for patient care, from 0.5 – 4 FTE per annum equivalent depending on your organisation.

Turn learning-focused data into improvement

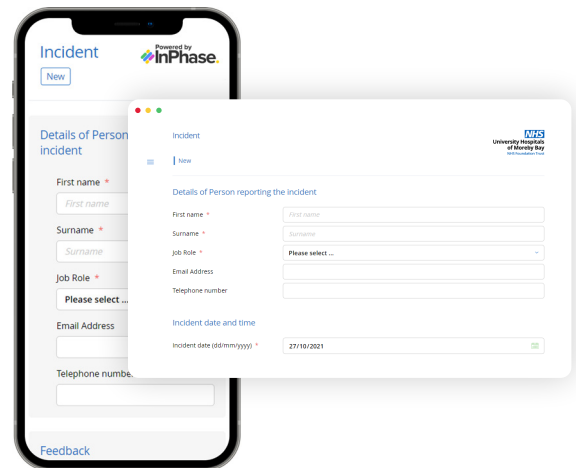

Oversight analytics delivers real-time alerts, flexible analysis, exceptions, collaboration, learning and action management delivering increased assurance and faster improvement.

Quickly and easily identify trends and exceptions with dials, heatmaps, and SPC performance charts. Make better decisions through incident triangulation with other oversight apps for: clinical audits, CQC, NICE, policy and performance. Robust reliable oversight from team and ward to board.

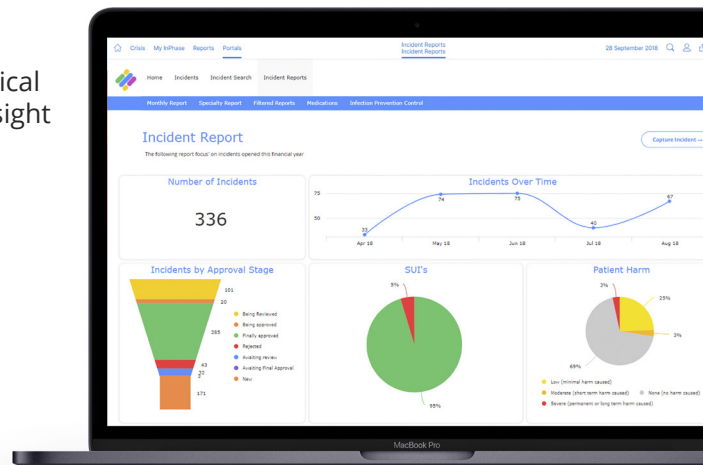

Easy migration, management and maintenance

For continuity of complete oversight, easily migrate all historical incident data. Full control of local questions, over 20 specific data types, with easy positioning, edit and instant deployment.

Graphical workflow editor with configurable triggers, alerts, routing and permissions management.

Regain 0.5-4 FTE clinical time per year with Incident Oversight's Fast Forms.

Benefits

Control Costs

Cloud computing and competitive pricing lets you transform your incident system cost effectively for LFPSE. Implement additional Oversight Apps to consolidate disparate systems and build up a fully integrated continuous quality improvement solution.

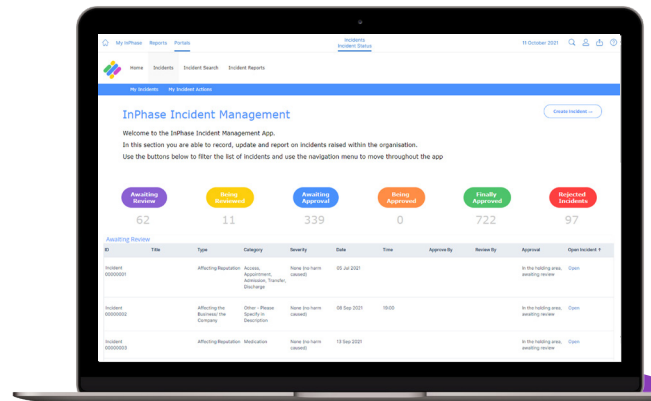

- ✓ An NHS England LFPSE (Learning From Patient Safety Events) incident system to upgrade your old system
- ✓ Save time compared to other LFPSE systems and return time to front line care.
- ✓ Make your incident reporting, reviewing, investigating and feedback learning, actions and change assurance quicker, easier and more engaging
- ✓ Improve your analysis to deliver better insight and foresight
- ✓ Effortlessly triangulate information across incidents, audits, risks and quality compliance to deliver superior oversight and assurance and improve patient safety and clinical outcomes

Improve Quality

Oversight turns incident reporting from being a clunky ordeal into an easy to use powerful solution that drives continuous improvement cycles more quickly. Triangulate data clearly and visually from other InPhase Apps and even other vendor's systems.

Save Time

Ditch the outdated, fiddly incident reporting tools that are slow and clumsy to use. Don't just fall into a time-consuming, expensive upgrade. Give your teams a lightning-fast platform on any device.

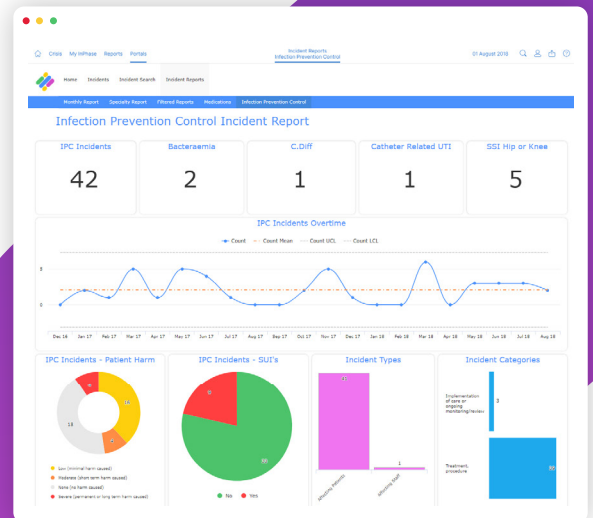

“ With Oversight everything will be in one place, meaning we don't need to pull data about the quality of care from multiple different sources. ”

Chief Nurse and Director of IPC
East and North Hertfordshire NHS Trust

“ The main reasons influencing our decision to choose InPhase as our supplier for Bedfordshire Hospitals NHS Trust are that it is LFPSE compliant, we can transfer all our existing data and documents straight into InPhase, it's easy to use for our users and the look and feel of the system. ”

The combination of all 4 of these factors made the choice a no brainer... InPhase ticks all the boxes. ”

Senior Quality Governance Systems and Informatics Coordinator
Bedfordshire Hospitals NHS Foundation Trust
